• Mac OS	• Visio
• Photoshop	• Visual Studio
• PhpStorm	• Windows OS
• Project	• Word

CODING SKILLS

• ASP.NET MVC	• PHP
• Bootstrap 3/4	• PostgreSQL
• C#	• Responsive Design
• CSS	• Ruby/Ruby on Rails
• HTML5	• SQL
• JavaScript/jQuery	• Symfony
• Java (Android)	• Visual Basic (VB)
• Laravel	• Vue.js
• MySQL	• WordPress

EXPERIENCE

PropertySync Technology Group | October 2019 - Present

While working at PropertySync I have been utilizing Docker, PostgreSQL, Ruby, SQL Server, Symfony, Laravel, and VueJS. I routinely create utilities with Ruby and VueJS for internal users to shorten tedious tasks involved in the process of parsing data converted from several legacy title company system database formats into PropertySync's proprietary system and database formats. In addition, another of my routine duties is to draft or revise technical documentation meant to assist with the troubleshooting and resolution of technical issues encountered by users as a benefit to current & future developers. I have also been tasked with creating several custom market share reports using PostgreSQL for several title company administrators that work with PropertySync. In addition, I assist customers with technical issues and take pride in maintaining a stellar level of customer service.

Triad Learning Systems | November 2017 - October 2019

During my tenure with the Triad, I completed a multitude of projects using AWS, Bootstrap 3/4, C#, CSS3, Docker, Git, HTML5, JavaScript, jQuery, Laravel, Linux, SQL, Symfony, VB Script, and Vue. I have maintained an exceptional level of customer service while collaborating with team members on project requirements, involving both front-end & back-end development and have successfully met or exceeded deadlines. The projects I have completed for TBH on my own or as a collaborative effort have had a considerably positive effect on company revenue. Prior to leaving, myself and two other developers successfully delivered a revamped version of Triad's flagship e-commerce website & systems..
